JECRC UNIVERSITY, JAIPUR RAJASTHAN

Digital Data & AI Literacy - BBA 1st Sem Assignment – 2

Instructor - Daya Shanker Saini

Assignment - 2: Digital Presence, AI Products & Visual Content

Q1. Website Deployment & Discoverability

Task: Take the personal website created in the previous practical session and make it accessible online.

a) Deploy the website using GitHub and Vercel. Connect a domain if available and explain the purpose of DNS in connecting the domain to the deployed website. Attach screenshots showing the GitHub repository, Vercel deployment and live website URL.

b) Set up Google Search Console for the website and explain how Search Console helps in website indexing and discoverability. Attach a screenshot of the property setup/verification or the Search Console dashboard.

NOTE: The submitted website should be the same project developed during the practical session, with any necessary improvements before deployment.

Q2. AI-Assisted Career Profile

Task: Create a professional digital career profile using AI tools.

a) Use Claude and/or Kickresume to create an ATS-optimised resume. Also use ChatGPT to improve your LinkedIn profile. Attach the final resume and relevant screenshots showing the AI-assisted process.

b) Create a reusable Claude prompt that can generate a tailored cover letter for a specific job description. Test the prompt with one job description and submit the prompt, job description and generated cover letter.

NOTE: Your resume, LinkedIn profile and cover letter should be based on your actual skills, education and experience. Do not add false information only to improve the output.

Q3. Build a Custom AI Chatbot

Task: Build and train a custom AI chatbot using Botpress for a school-specific use case.

a) Create a chatbot for a suitable college/school-related use case and train it using an uploaded PDF as the knowledge source. Test the chatbot with at least three relevant questions and attach screenshots showing the chatbot, uploaded knowledge source and sample responses.

b) Embed the chatbot on the personal website created in the earlier session. Submit the live website URL and explain how the chatbot improves the usefulness of the website for its target users.

NOTE: The chatbot should provide responses based on the uploaded PDF/knowledge source. Test the responses and correct obvious errors before submission.

Q4. AI Product – From Idea to Live URL

Task: Ideate, validate and build a small AI-powered product using Lovable.dev or Bolt.new.

a) Select a real problem faced by students, colleges, small businesses or another clearly defined user group. Explain the problem, target users, proposed AI solution, key features and why the solution would be useful. Attach the main prompt and screenshots of the product-building process.

b) Build the product and make it accessible through a live URL. Submit the live URL and briefly explain three improvements made during development and one success metric that could be used to evaluate the product.

NOTE: The product should solve a clearly defined problem and should demonstrate meaningful use of AI rather than being only a static webpage.

Q5. AI-Generated Visual Content

Task: Create and refine an AI-generated visual using the tools covered in the practical session.

a) Use Adobe Firefly and/or Canva AI to generate an image for a professional purpose such as a social media post, promotional creative, event poster or personal branding visual. Use an appropriate prompt and refine the generated image through at least one improvement. Attach the prompt, initial output and final output.

b) Select a suitable image and improve it using Remove.bg and/or generative fill. Explain what was removed, replaced or enhanced and how the final version is better suited to its intended purpose. Attach before-and-after screenshots/printouts.

NOTE: The final visual should demonstrate purposeful design, appropriate use of AI and meaningful refinement rather than a single unedited AI-generated image.

INSTRUCTIONS:

1. Start your assignment with College Name, Course Name, Assignment Title, Instructor Name, Student Name, Roll Number, Branch, Semester and Section.

2. Complete all questions Q1–Q5 in the given order with proper numbering.

3. Attach all required screenshots, prompts, outputs, URLs and other evidence under the respective questions.

4. For Q1, include evidence of GitHub/Vercel deployment, live website and Google Search Console setup.

5. For Q2, submit the ATS-optimised resume, LinkedIn optimisation evidence, cover-letter prompt and generated cover letter.

6. For Q3, submit Botpress chatbot evidence, PDF knowledge-source evidence, sample responses and the website embedding/live URL.

7. For Q4, submit the AI product prompt, development screenshots, live URL and required product explanation.

8. For Q5, submit the AI prompt, initial and refined visual outputs, and before-and-after editing evidence.

9. Use only your genuine academic, skill and project information in career-related documents.

10. All practical activities should be performed by the student using the respective AI tools.

11. Do not copy AI-generated outputs without reviewing and understanding them. Make meaningful improvements wherever required.

12. Verify the functionality of all live links and ensure that screenshots are clearly visible and readable.

13. Maintain proper formatting, readability and neatness throughout the assignment.

Important: This assignment is designed to assess your ability to build, deploy, improve and present practical AI-enabled digital solutions using no-code and AI tools.

*** Good Luck ***
